

INFINITY RIO RANCH

Admin Panel User Manual

A practical guide to managing inquiries, clients, website content, and invoices

WHO THIS IS FOR

Owners and authorized team members who maintain the Infinity Rio Ranch website and booking records.

Version 1.0 | Prepared August 2026

Contents

1. Getting started	3
2. Leads	3
3. Clients and bookings	4
4. Website CMS	5
5. Blog	7
6. Invoices and agreements	7
7. Good operating practice	8
8. Troubleshooting	9

The page references are a guide only; they may shift if this document is edited. The panel itself is the source of truth for available controls.

1. Getting started

What the admin panel does

The admin panel is the working area behind the public website. It is divided into four jobs: follow up on incoming inquiries, manage booked clients, update website content, and issue invoices.

Area	Use it for
Leads	Read new website inquiries, reply externally, update progress, or turn an inquiry into a client.
Clients	Maintain booking details, payment status, notes, and booking-related invoices.
CMS	Edit public website copy, blog posts, galleries, event packages, testimonials, FAQs, and venue lists.
Invoices	Create, preview, print, email, and revisit invoices.

Access and sign in

Open the website address followed by /admin, then enter your authorized email address and password. Successful sign-in opens Leads.

1. Go to /admin or /admin/login.
2. Enter your email address and password. Use the eye icon if you need to check the password you typed.
3. Select Sign in. If your account is not on the approved administrator list, the panel will deny access even if the password is correct.

NEW ADMINISTRATOR ACCOUNTS

The panel has no public sign-up. An owner must first create the user in Supabase Authentication and add that user to the admin allowlist. Keep administrator access limited to people who need it.

Navigation and signing out

The left sidebar contains Leads, Clients, CMS, and Invoices. CMS opens a horizontal tab bar for website editors. Select Sign out at the bottom of the sidebar when you finish, especially on a shared computer.

LIVE VERSUS DRAFT

Content marked Published or Live is available to public site visitors. Draft content stays in the admin panel. Saving keeps your changes in the system; use the relevant published control when you are ready for visitors to see them.

2. Leads

Leads are inquiries submitted through the website contact form. The list excludes leads that have already been converted into clients, keeping the inbox focused on unbooked inquiries.

Review and organize an inquiry

4. Open Leads from the sidebar.
5. Use Search to find a name, email, phone number, event type, or wording from a message. Use the status chips to narrow the list.
6. Select a lead to open its details. Opening a New lead changes it to Read automatically.
7. Use the email link to start a reply in your email application, then select a status: New, Read, Replied, or Archived.

Status	Recommended meaning
New	Not yet opened or reviewed.
Read	Reviewed, but no reply has been sent yet.
Replied	You have contacted the person and are awaiting their response.
Archived	No further follow-up is needed.

Convert a lead into a client

Use conversion only when the inquiry has become a genuine booking or client record. The action moves the workflow to Clients and removes the inquiry from the leads inbox.

8. Open the lead and confirm its contact and event details.
9. Select Convert to client and confirm the prompt.
10. On the client page, fill in or correct the booking fields and save them.

PERMANENT ACTION

Delete removes a lead permanently after confirmation. Archive is the safer choice for inquiries you may need to refer to later.

3. Clients and bookings

Clients are the booking records for people or organizations that have progressed beyond an inquiry. They can be created from a lead or directly from the Clients screen.

Find or create a client

11. Open Clients from the sidebar.
12. Search by name, email, phone number, event type, or package. Filter by booking status or payment status when reviewing the pipeline.
13. Select a row to open the client record. To add one manually, choose + New client.

Maintain a client record

A new client requires a name. Add email, phone, event date and type, guest count, package, agreed amount, advance paid, and internal notes as applicable. Select Save when you are done.

Field	How it is used
Agreed amount	The total agreed booking value. It supports balance calculations.
Advance paid	A deposit or advance already received against the booking.

Booking status	Booked, Completed, or Cancelled.
Payment status	Unpaid, Partial, or Paid. Keep this aligned with real payment records.
Notes	Internal booking context. Do not use this for information the client should receive.

Update status and payment status

On an existing client record, select the visible status chips to update booking and payment status immediately. Review the amount and advance values before marking a booking Paid.

Client invoices and documents

The Invoices panel on a client record shows invoices already raised for that booking. Use it to create a new booking invoice, review the client-facing invoice, edit an existing invoice, email it, or view the rental agreement.

AGREEMENT DELIVERY

The first invoice for a booking is the one that includes the rental agreement. Later invoice emails intentionally send the invoice only, so the client does not receive duplicate agreements.

PERMANENT ACTION

Deleting a client permanently removes the client record after confirmation. Confirm you no longer need the booking history before proceeding.

4. Website CMS

Open CMS from the sidebar. The tabs across the top control different parts of the public website. Most list-based editors share the same pattern: select an item, edit its fields, set Order and Published, then Save.

Common CMS controls

Control	What it does
+ New	Starts a new item.
Order	Controls the display sequence. Lower numbers appear first.
Published / Live	Makes an item visible to public visitors. Switch it off to keep an item as a draft.
Save	Stores the selected item's changes.
Cancel	Closes the editor without saving current unsaved edits.
Delete	Permanently removes the selected item after confirmation.

Page content

Use Page content to edit website headings, paragraphs, labels, and contact details. Choose Home, About, Gallery, Contact, or Contact details in the left column. An indicator marks fields with unsaved changes.

14. Select the page area you want to update.

15. Edit the text field or multi-line field. Leave a field empty to let the website use its built-in default copy.
16. Use Reset beside a field to restore its original shipped wording, or select Save changes to store all current changes.

CONTACT DETAILS

The Contact details section is reused across the site and invoices. Check phone numbers, email addresses, and other public contact information carefully before saving.

Gallery

Use Gallery to manage photos shown on the public gallery. Each item needs an image and caption.

17. Select + New photo, then upload an image file or paste an existing image URL or path.
18. Add a caption, choose a category (ceremony, reception, outdoor, or details), and choose the layout size if needed.
19. Set Order. Mark Featured only when the image should be the highlighted gallery photo. Only one image can be featured at a time.
20. Leave Published selected to show the photo publicly, then select Save.

IMAGE DELETION

Deleting an uploaded gallery image removes its public image record and, when applicable, its stored upload. Make sure the image is not needed elsewhere before deleting it.

Events and packages, testimonials, and FAQs

Editor	Required fields	Optional fields
Events & Packages	Title	Blurb; image path
Testimonials	Quote; name	Event
FAQs	Question; answer	None

Use clear, visitor-ready language. For Event image paths, use an existing public site path such as /assets/site/events/ev-61.png, or confirm that the referenced asset is available before publishing.

Venue numbers, amenities, included items, and event types

Editor	Purpose
Venue numbers	Numbers and captions used for venue facts, including the About page grounds detail.
Amenities	Amenity cards on the About page. Each requires a title; icon and description are optional.
What's included	The items shown in the public 'Every celebration includes' list.
Event types	The choices shown on the public inquiry form. New options are available without redeploying the site.

5. Blog

The Blog tab manages guide and article content. Each post can be saved as a draft, previewed, and then published to the public /blog area.

Create a post

21. Open CMS, then Blog, and select + New post.
22. Enter the required Title. The URL slug is generated from the title for new posts; adjust it before saving if you want a shorter URL.
23. Add an excerpt, category, tags, author, cover image, and image alt text as appropriate.
24. Write the article body in Markdown. Use Preview to review exactly how it will appear to visitors.
25. Complete the content brief and search listing fields when relevant, then review the Publish readiness prompts.
26. Select Save. Tick Published only when the post is ready to appear publicly.

Markdown quick reference

Write this	Result
## Section heading	A section heading
important	Bold text
- Item	A bullet point
[Contact us](/contact)	A link to the contact page

Images, FAQ, and SEO

Choose an existing gallery image or upload a new cover image. Always add descriptive alt text. The Insert photo control adds a gallery image at the cursor in the Markdown editor. Add related questions and answers in the FAQ section; they appear at the end of the post and support search-engine structured data.

URL CHANGES

Changing the URL slug of an existing published post breaks the old link and any saved or shared links pointing to it. Prefer keeping the existing slug once a post is live.

PUBLICATION CHECK

Before publishing, use Preview, confirm the title and excerpt read well, confirm cover-image alt text, and review the readiness checklist. A saved draft is not publicly visible.

6. Invoices and agreements

Invoices can be created from the Invoices screen or from a client record. The system assigns invoice numbers automatically in the form INV-YYYY-#### when an invoice is saved.

Create and send an invoice from Invoices

27. Open Invoices and select + New invoice.

28. Enter the client name. Add client email and address, issue and due dates, tax percentage, advance paid, and notes as needed.
29. Add line items. Each row has a description, quantity, and unit price. Add or remove rows until the invoice is complete.
30. Review the live subtotal, tax, total, advance credit, and balance due in the invoice preview.
31. Select Save. Then use Print / PDF to print or save a PDF from your browser, or Email client to send the client-facing invoice link.

Create a booking invoice from a client

The client page offers three starting purposes: Advance, Extra charges, and Final payment. These prefill the invoice differently so the booking balance is handled consistently.

Purpose	Typical use
Advance	Request the deposit that holds the event date. The first email also includes the rental agreement.
Extra charges	Add charges that arose beyond the package. It starts empty intentionally.
Final payment	Bill the agreed amount and credit any uncredited advance already paid.

32. Open the relevant client and go to its Invoices panel.
33. Choose + New invoice, select the purpose, check dates, tax, and advance credit, then add or edit line items.
34. Select Create invoice. Review it, then choose Email or Edit invoice as needed.

Client links and agreement documents

Each saved invoice has a client-facing link. From a client record you can open the invoice preview, copy the link, open it in a new tab, or email the invoice. The booking's rental agreement is available from the first invoice and can be viewed or downloaded from the client record.

BEFORE EMAILING

Confirm the client email address, due date, line items, and balance due. Email delivery depends on the configured email service. If the panel reports that email service may not be configured, the invoice has not been sent.

7. Good operating practice

A simple daily routine

- Start in Leads. Review new inquiries, reply promptly, and set an accurate status.
- Convert confirmed bookings into Clients, then complete the booking values and payment position.
- Create invoices from the client record when the invoice relates to a booking. This keeps the agreement and invoice history together.
- Use drafts for website content until it is reviewed. Check the public page after publishing material changes.
- Sign out when finished.

Before you publish or email

Task	Check
Website content	Spelling, factual accuracy, display order, and Published setting.
Gallery	Caption, category, layout size, and whether the image should be featured.
Blog post	Preview, slug, image alt text, FAQ, SEO description, and Published setting.
Invoice	Client email, dates, line items, tax, advance credit, total, and balance due.

Records and privacy

Only authorized staff should use the panel. Treat names, emails, phone numbers, addresses, booking notes, and invoices as confidential business information. Do not share screenshots containing client data without a legitimate business reason.

8. Troubleshooting

Problem	What to do
I cannot sign in	Check the email and password. If they are correct but access is denied, ask the owner to confirm the account is in the admin allowlist.
I cannot see a new website change	Confirm you selected Save and, for list content or a blog post, that Published or Live is enabled. Refresh the public page after a short wait.
A CMS item will not save	Complete all fields marked with an asterisk. Confirm required images or captions are present.
An image upload failed	Try a smaller image file, confirm your connection, then retry. You may paste a valid existing image URL or path instead.
Invoice email did not send	Confirm there is a client email address. If the panel says email service may not be configured, an owner must configure the invoice email service and sender domain.
I deleted something by mistake	There is no restore button in the panel. Contact the site administrator promptly; recovery may require a database backup.

Owner setup reference

Administrator access, the Supabase connection, and invoice email are managed outside the panel. For technical setup and deployment information, see the project documentation in the repository.

Related project reference: docs/admin-plan.md in the local project repository.

Need help? When requesting support, include the page you were on, the action you took, the exact message shown, and whether the issue affects the public website, a client, or an invoice.
